Symbol definition   ● : Standard   ★ : Option

C-PTFE: Carbon-reinforced PTFE   G-PTFE: Glass Fiber reinforced PTFE   G-PP: Glass Fiber reinforced PP  
 C-PVDF: Carbon Fiber reinforced PVDF   C-ETFE: Carbon Fiber reinforced ETEF

※ MES-080 uses both  
O-ring and Gasket,

## Characteristics of Fluorocarbon Resin Materials

Fluorocarbon resin surpasses any other plastics in both heat resistance and chemical resistance. The fluorocarbon resins employed in our pumps are PVDF, ETFE and PFA.

PFA, with characteristic properties of high corrosion resistance (resistant to various corrosive actions) and high purity, provides the supreme chemical and thermal stability. PVDF and ETFE, with excellent mechanical characteristics and processability, are also superior corrosion resistant materials for pump components although their corrosion resistance is somewhat less than that of PFA.

Basic comparison of fluorocarbon resins is given in the table to the right.

## Characteristics of Ceramic Materials

The main shaft of our magnetic drive pump is made of alumina ceramic or silicon carbide ceramic.

These ceramics, with high-strength, high-modulus and high-heat-resistance characteristics, are perfect materials for pump components.

While heat shock fracture is a common concern among ceramic materials, alumina ceramic is resistant up to 180°C of a temperature change and silicon carbide ceramic is resistant up to 500°C.

### Basic Comparison (for reference only)

Properties		Unit	PTFE	PFA	ETFE	PVDF
Specific gravity	—		2.14~2.20	2.12~2.17	1.70	1.75
Continuous service temperature	°C		260	260	150	150
Tensile break strength	MPa		29	35	49	55
Corrosion resistance	Acid chemical solution		◎	◎	○	○
	Alkaline chemical solution		◎	◎	○	○
	Organic solution		◎	◎	▲	▲

Symbol definition ◎ : Excellent ○ : Good ▲ : Conditional

#### ● Codes and names

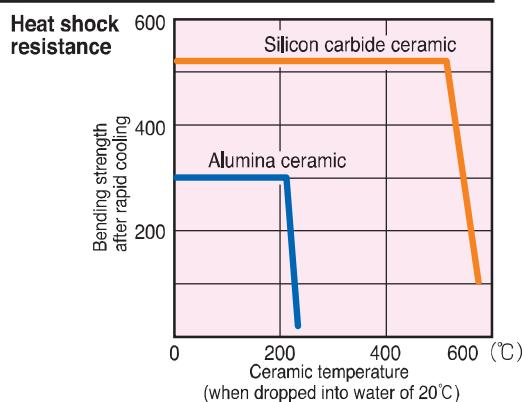

PFA: Tetrafluoroethylene - Perfluoroalkylvinylether copolymer

PVDF: Polyvinylidene fluoride

ETFE: Ethylene-Tetrafluoroethylene copolymer

## Ceramics: Physical Properties (for reference only)

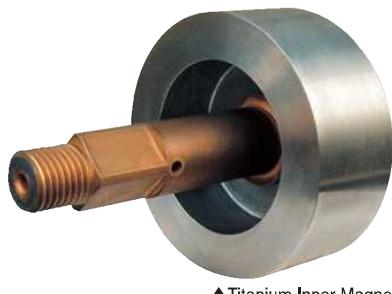

Properties	Unit	Silicon carbide ceramic (SiC)	Alumina ceramic (Al <sub>2</sub> O <sub>3</sub> )
Specific gravity	—	3.1	3.9
Vickers hardness	GPa	21	17
3-point bending strength	MPa	540	380
Coefficient of linear expansion	×10 <sup>-6</sup> /°C	4.0	7.0

## Titanium Inner Magnet

In addition to its corrosion- and heat-resistance characteristics, TEXEL magnetic drive pump is available with another advantageous feature that prevents penetration of chlorine and the like.

Titanium main shaft and impeller, according to applications, are also available.

### Perfect selection for liquid with a high concentration of chlorine:

While fluorocarbon resins have superior corrosion resistance, saturated salt water electrolyte with a higher concentration of free chlorine has been a formidable case since chlorine penetrates the resin coating of the inner magnet and makes a pump practically unserviceable.

Titanium-coated inner magnet is our smart solution to prevent chlorine penetration. The table below shows cases of the penetration in fluorocarbon resin-coated inner magnets in this application.

#### Chlorine Penetration in Fluorocarbon Resin-coated Inner Magnet of Magnetic Drive Pump

Extracted from Technical Paper at 1993 National Convention of Electrolytic Soda Manufacturers

PVDF coat	Expanded by penetration in six months
ETFE coat	Expanded by penetration in one month
Coat thickness	3mm

#### Conditions

Application: Electrolysis of salt water  
Type of salt water: Chlorine contained  
Free chlorine concentration: 2000 ppm  
Temperature: 80°C

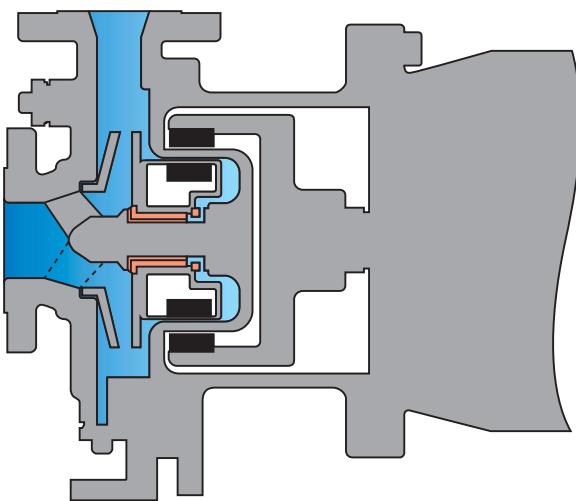

Note : No penetration influence on casings was observed in either case.

## Solution for Bearing Operation in “Dry State”

### Elimination of three major troubles

Idling operation, operation under cavitation and operation with aeration are the three major issues of the magnetic drive pump, which frequently cause damage to the plain bearing of the pump, ending up with a catastrophic failure.

Our analysis has explained these complex problems, resulting in successful improvement of durability of our magnetic drive pumps.

- Carbon material is used for the sliding component.
- The carbon component has exchangeability with the standard component.
- Contact us for applicable chemicals.
- Contact us for further details.

### Understanding of three major troubles

These troubles lead to the same result, but each trouble has its particular mechanism especially the condition of the plain bearing inside the pump. Focusing attention on this point, we have achieved extensive improvement.

#### ● Idling operation

Idling operation is an operating state where the pump is not being primed. The impeller has no thrust produced in pumping-up and the plain bearing is completely dry.

#### ● Operation under cavitation

The pump is in pumping-up operation. The plain bearing is in a half-dry state as some of created bubbles get into it through the rear casing. During this operation, the impeller has both axial and radial thrust.

#### ● Operation with aeration

Increased aeration in the pumping operation would disable the pumping operation. It causes changes of the load on the impeller. The plain bearing is in a half-dry state because of aeration by some of created bubbles.

### Durability test results

The durability test results of the plain bearing, tested in each operating condition, are given in the table below.

<b>Idling operation</b>	No failure found after 2.5-hour test operation
<b>Operation under cavitation</b>	No failure found after 3-hour test operation at 3% fall of head
<b>Operation with aeration</b>	No failure for 3 hours before pumping-up operation is disabled.

Note: Data are for reference only and are not guaranteed values.

## Type Selection Procedure

### 1 Selection of pump type

Select a pump type that meets your operating frequency, discharge rate and total head, using the frequency-capacity chart.

### 2 Selection of motor rated power

Read and find the required operating shaft power in the performance curve according to the specific gravity of the handling liquid. For safety purpose, the rated power of the motor used for the pump has to be at least 1.1 times the found shaft power.

### 3 Selection of material

#### (Type, concentration and temperature of handling liquid)

Select the materials of the main body and the sliding component based on the type, concentration and temperature of the handling liquid, using the corrosion chart.

### 4 Checking of NPSH Re

In general, it would be usable if NPSH Av is not less than 1.3 times NPSH Re. Contact us if further details are needed.

### 5 Checking of operating pressure

The withstanding pressure of the pump varies according to the liquid temperature. Contact and consult us if the liquid temperature is high.

### 6 Outside dimensions of pump

#### (space required for installation)

See the pump drawing to know the space required for installation.

Note : When installing the back pull-out pump, prepare a space behind the rear end of the pump for the convenience of maintenance.

### 7 Determination

Determine the pump type based on the above selections and considerations.

## Dry-Run Protector

The Texel Dry-Run Protector (DRP), which is controlled by the motor current, requires neither extra accessories for the piping and pump, nor anti-explosion measures, even under hazardous conditions.

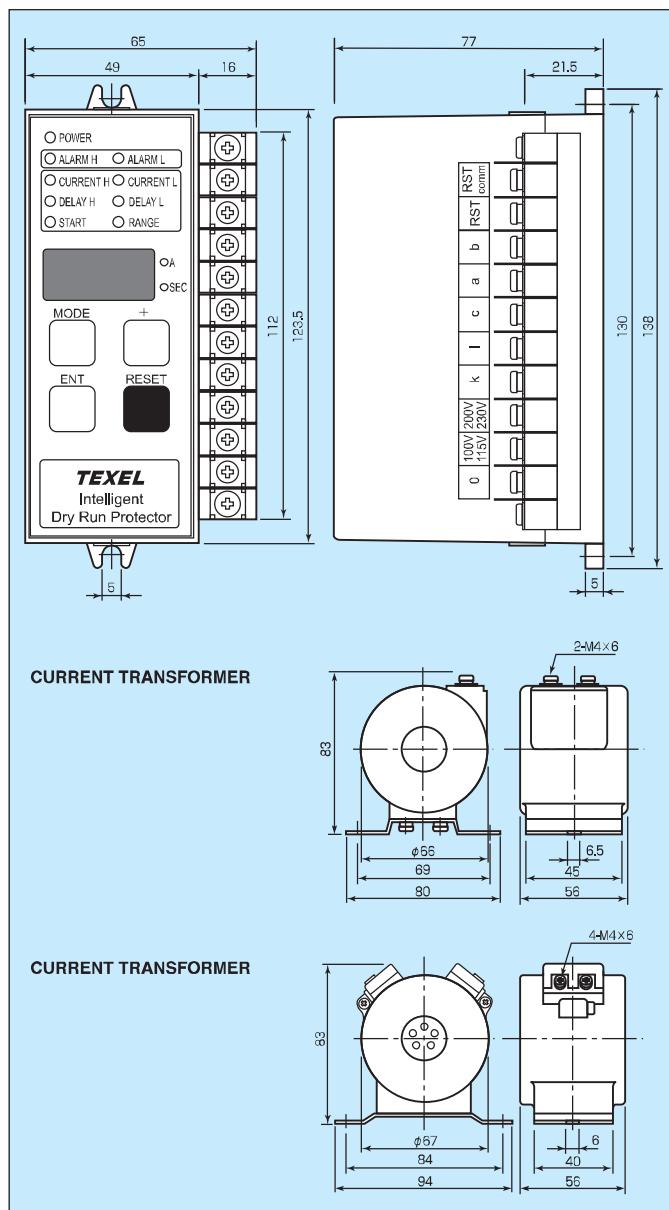

By setting the current value during shut-off operation, not only shut-off operation but also dry operation and cavitation can be prevented.

This device is recommended to lengthen the service life of the Texel Magnetic Drive Pump.

The functions of DRP for protecting the pump are as follows:

- 1) Detection of Dry Run (No water in the pump)
- 2) Detection of Not pumping (Liquid has filled the pump)
- 3) Detection of Shut-off running  
(Discharge Valve is completely closed)
- 4) Detection of Cavitation
- 5) Detection of Excessive / Inadequate Flow Rate

### Outside Dimensions of the DRP

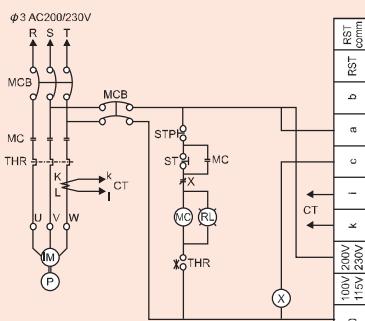

### Standard Specifications

- Power Supply      50/60Hz 100V/115V/200V/230V  
Single Phase
- Power Consumption    4W
- Alarm Contact Capacity    1C AC250V 3A
- Ambient Conditions  
Temperature : 0~40 °C  
Moisture : RH40~85%

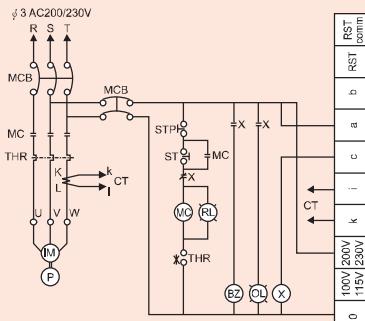

### Wiring

- 1) The control power supply for the DRP is single phase, 100V~115V or 200V~230V. Connect the "b" contact of the output contact IC (the mark on the DRP terminal block is "b") to the excitation wire of the magnetic contact.
- 2) Among the wires between the magnetic contact and the motor, connect one wire to terminals "K" and "L" of the attached current transformer with a primary winding. Connect the secondary terminals, "k" and "l" of the current transformer to the DRP terminals "k" and "l".
- 3)

**Fig. 2 Standard Circuit (Example)**

**Fig. 3 Alarm Circuit (Example)**

#### Abbreviated Codes

MCB	Main Circuit Breaker
MC	Magnetic Contact
THR	Thermal Relay
M	Motor
P	Pump
STP	Stop Button
ST	Start Button
X	Relay
BZ	Buzzer
CT	Current Transformer

## Corrosion Resistance Table

●Symbol — : No data

Note : ①Please consult us when a liquid to be used is a mixture or contains solid particles.

②Please consult us when selecting the material marked with ※.

③This table just lists a maximum use temperature for each material itself in terms of corrosion resistance.

④Specific Gravity column indicates reference values.

⑤Use of the material marked with ★ is not recommended in the case of glass fiber reinforced PP.

⑥The material of the shaft is alumina or SiC.

The material of the bearing is C-PTFE, G-PTFE, carbon, or SiC.

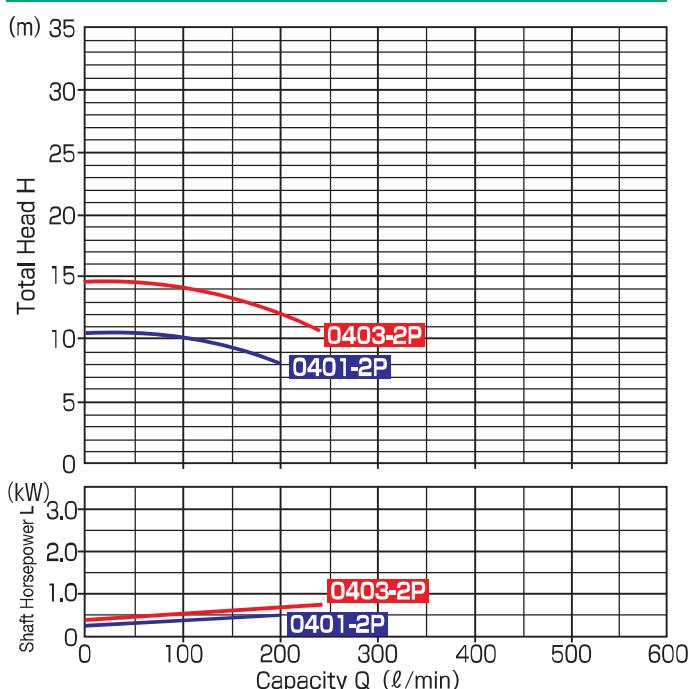

## MEP-040 Series (Suction 40A × Discharge 40A)

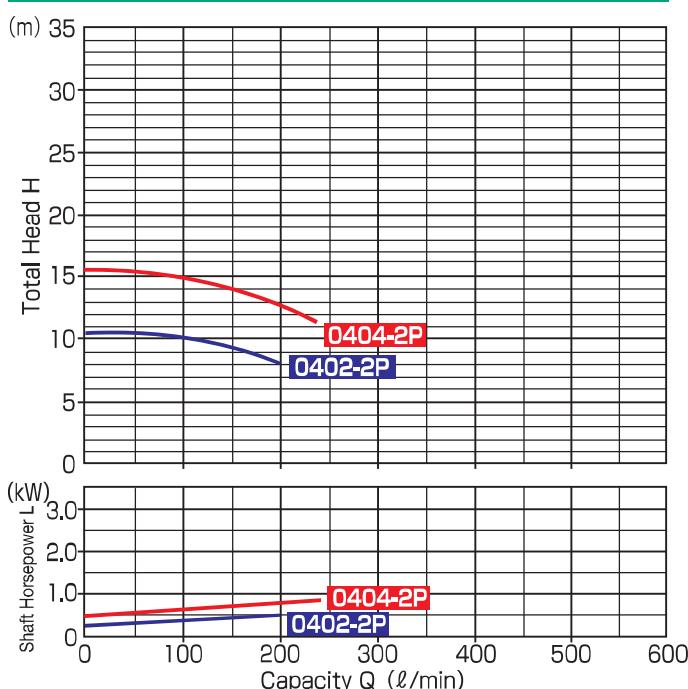

### Pump Specifications

- Operating Temperature 0~80°C
- Rotation Direction Clockwise (viewed from the motor)
- Flange JIS 10K FF (Please consult us about ANSI/DIN standard.)
- Finish Paint Munsell 2,5B4/8(pump body)
- Motor IEC flanged induction motor
- Accessories Foundation bolts (M10×125L×40b)

### 50Hz Performance Curve & Technical Data

## MET-050 Series (Suction 50A × Discharge 40A)

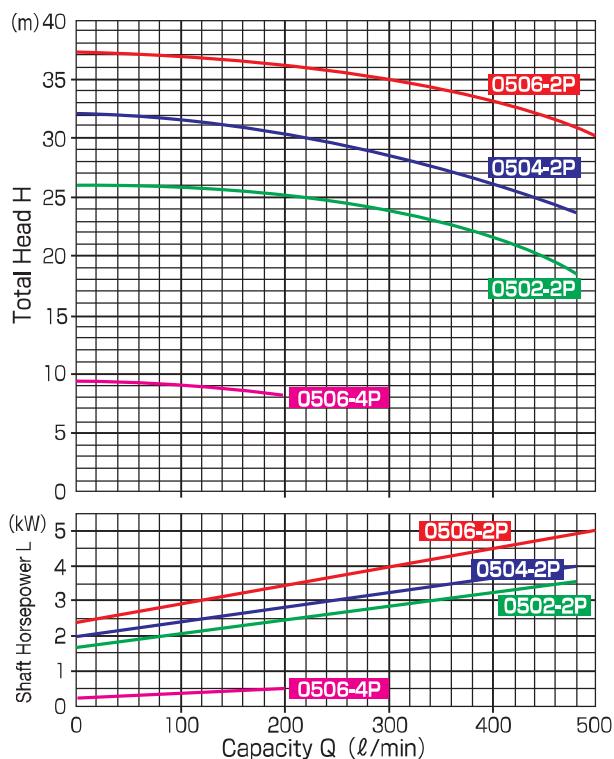

### Pump Specifications

- Operating Temperature -20~120°C (Please consult us about 0°C below and 100°C higher when used)  
PVDF · ETFE : 0~90°C
- Rotation Direction Clockwise (viewed from the motor)
- Flange JIS 10K RF (M16 Tapped hole) (Please consult us about ANSI/DIN standard.)
- Finish Paint Munsell 2.5B4/8(pump body)
- Motor IEC flanged induction motor
- Accessories Base & Foundation bolts (M12×160L×50b)

102	Drain Flange	FC200
105	Mouth Ring	C-PTFE/G-PTFE/SiC/Carbon
126	Impeller Set Ring	PTFE
301	Base	SS400

Note: Inner Magnet (058) and Magnet Lining (059) are integrated and engaged with Impeller (013).

## MTA-150 Series (Suction 150A x Discharge 125A)

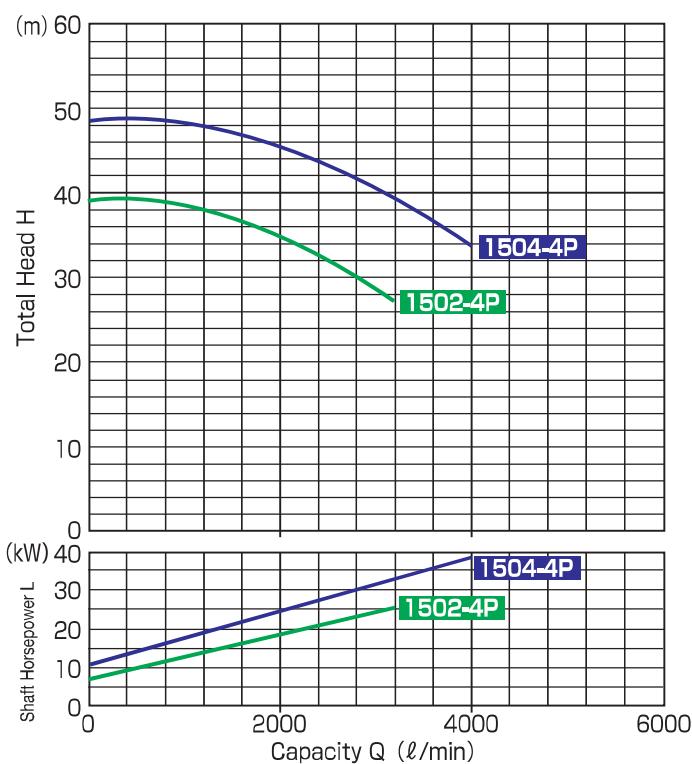

### Pump Specifications

- Operating Temperature -20~100°C (Please consult us about 0°C below when used)
- Rotation Direction Clockwise (viewed from the motor)
- Flange JIS 10K RF (Please consult us about ANSI/DIN standard.)
- Finish Paint Munsell 2,5B4/8(pump body)
- Motor IEC flanged induction motor
- Accessories Base & Foundation bolts (M16×200L×63b)

### 50Hz Performance Curve & Technical Data

### 60Hz Performance Curve & Technical Data

Model	Capacity (l/min)	Total Head (m)	NPSH Re (m)	Motor Output (kW)
MTA-1501-4P	2000	23	3.0	11~30
MTA-1503-4P		30		

Note: NPSH Re value shown in the table is that obtained from the maximum suction pipe diameter.

Model	Capacity (l/min)	Total Head (m)	NPSH Re (m)	Motor Output (kW)
MTA-1502-4P	2500	32	4.2	11~37
MTA-1504-4P	3000	40	5.5	

Note: NPSH Re values shown in the table are those obtained from the maximum suction pipe diameter.

102-25	O-ring(Air Vent Plug)	FPM / EPDM
102-29	O-ring(Suction)	FPM / EPDM
102-37	Partition Plate Gasket	FPM / EPDM
105	Mouth Ring	Carbon/C-PTFE
104-46	Outer Magnet Set Screw	SNCM
120	Partition Plate	G-PP
301	Base	FC200

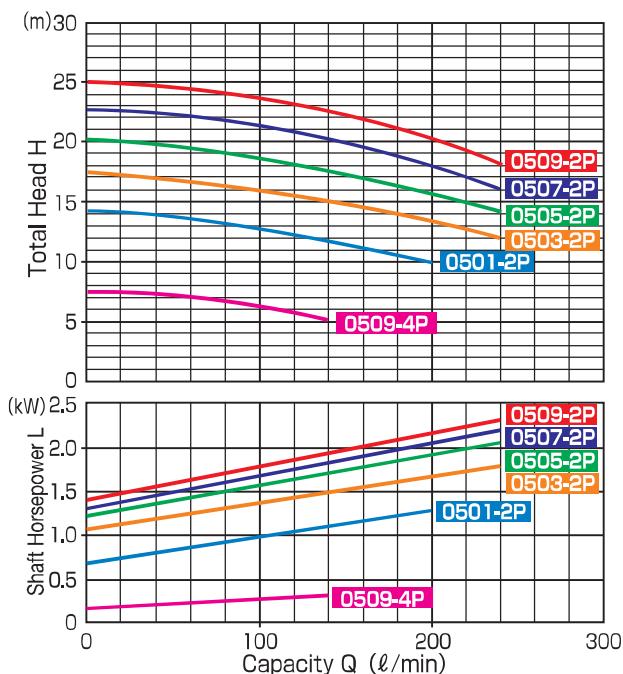

Note: Inner Magnet (058) and Magnet Lining (059) are integrated and engaged with Impeller (013).

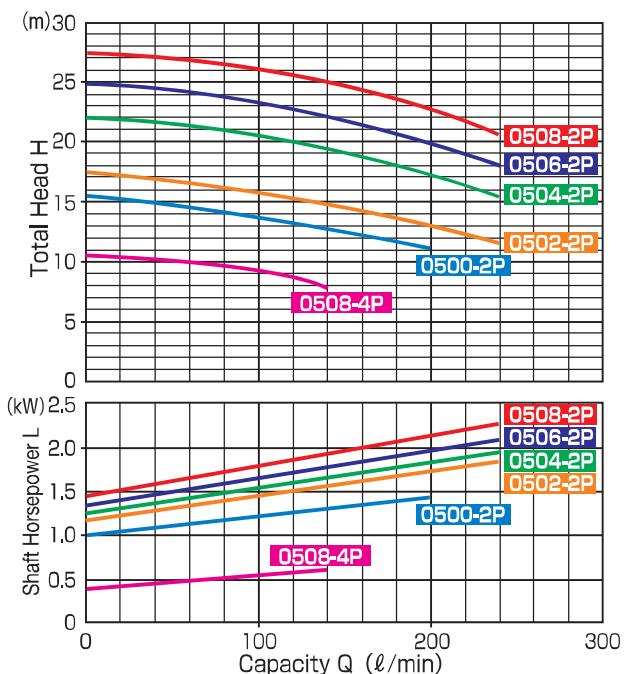

### Pump Specifications

- Operating Temperature 0~80°C
- Rotation Direction Clockwise (viewed from the motor)
- Flange JIS 10K FF (Please consult us about ANSI/DIN standard.)
- Finish Paint Munsell 2.5B4/8(pump body)
- Motor TEXEL flanged induction motor / IEC flanged induction motor
- Accessories Base & Foundation bolts (M12×160L×50b)

### 50Hz Performance Curve & Technical Data

### 60Hz Performance Curve & Technical Data

Model	Capacity (l/min)	Total Head (m)	NPSH Re (m)	Motor Output (kW)
MES-0501-2P	200	10	1.8	0.75~3.7
MES-0503-2P		13		
MES-0505-2P		15		
MES-0507-2P		18		
MES-0509-2P		20		
MES-0509-4P	100	6	1.0	0.4 · 0.75

Note: ① Motor output of 0.4 kW (4-pole) is only applicable when a TEXEL flanged induction motor is used.  
 ② Motor output of 3.7 kW is only applicable when an IEC flanged induction motor is used.  
 ③ NPSH Re values shown in the table are those obtained from the maximum suction pipe diameter.

### Pump Identification

**MES - 050 1 F 01 A S F 4**

1 2 3 4 5 6 7 8 9

① Model    ② Suction Pipe Size

③ Model Number    Please refer to Performance Curve

④ O-ring Material

F : FPM   E : EPDM   Z : Other

⑤ Motor Output

00 : 0.4kW   01 : 0.75kW   02 : 1.5kW  
 03 : 2.2kW   05 : 3.7kW

⑥ Pump Body Material

Type	Tank	Casing	Impeller	Inner Magnet	Rear Casing
A	PP				C-PVDF
P	PVDF				
Z	Other Combinations or Special Option				

### 7 Motor Type

S: TEFC/outdoor TEXEL motor A: Explosion-proof increased safety (eG3) TEXEL motor

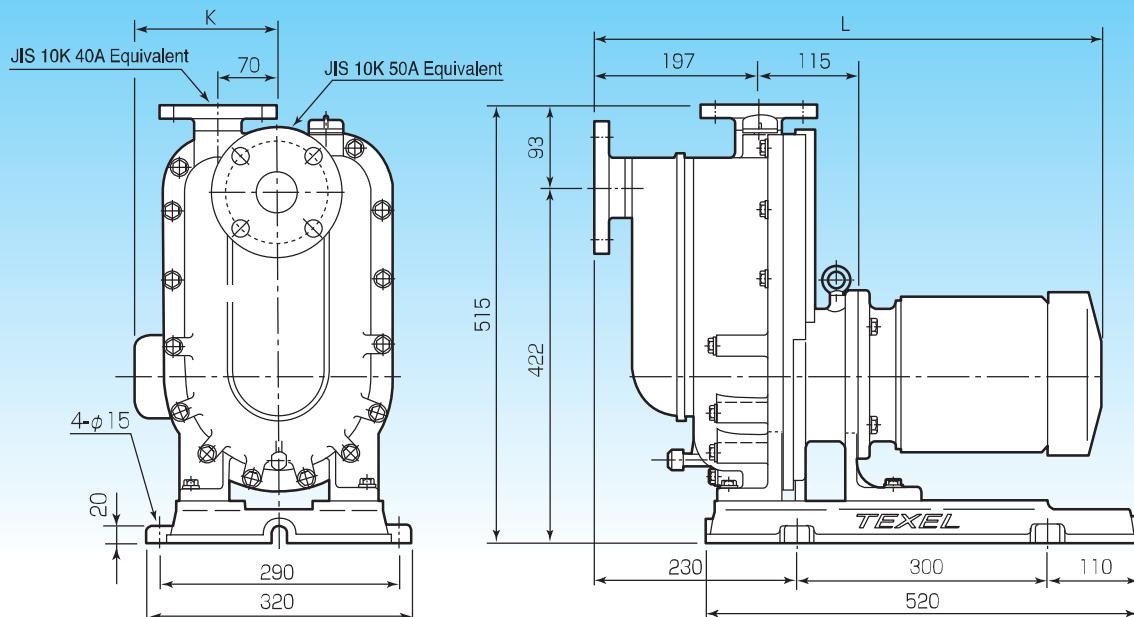

T:IEC standard explosion-proof (d2G4) motor    C : Other

### 8 Material Combination

Type	Shaft	Front Thrust Ring	Rear Thrust Ring	Mouth Ring	Bearing
A	Alumina-ceramic				C-PTFE
B	SiC				
C	SiC				Carbon
E	SiC				C-PTFE
F(Standard)	Alumina-ceramic				Carbon
G	Alumina-ceramic				G-PTFE
Z	Other Combinations or Special Option				

⑨ Number of Poles "4" is shown only when a 4-pole motor is installed.

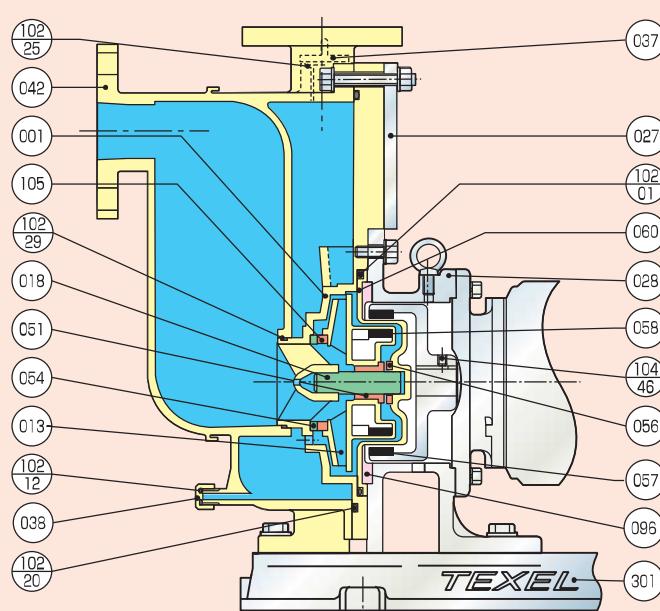

## Dimensions

Motor Output (kW)	TEFC		eG3		Weight (kg) (41)
	K	L	K	L	
0.4	147	541	150	550	
0.75	161	559	169	559	
1.5	176	585	183	585	
2.2	176	605	205	616	

Note: ① The weight of pump does not include the motor weight.  
 ② The dimensions shown above are applicable when a TEXEL flanged induction motor (2-pole) is used.  
 When using special motors (such as explosion-proof motors), please contact us.  
 ③ The figures in parentheses are reference values.  
 ④ Please consult us when you use 3.7kW IEC flanged motor.

## Construction Diagram

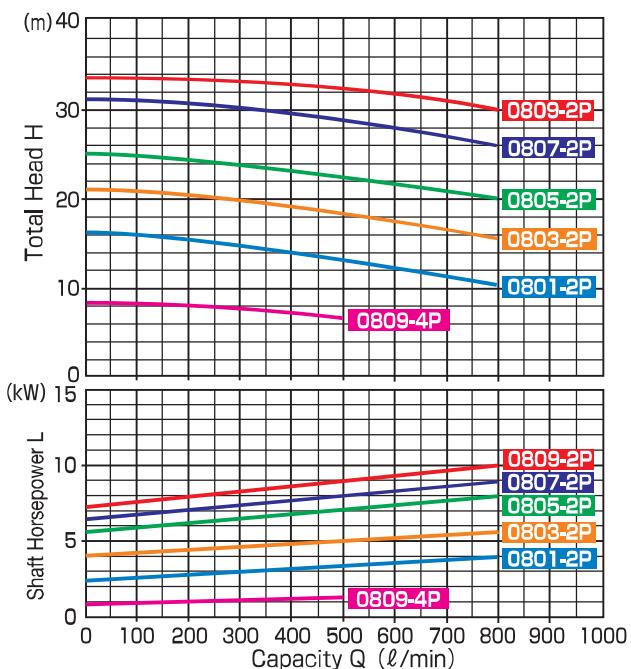

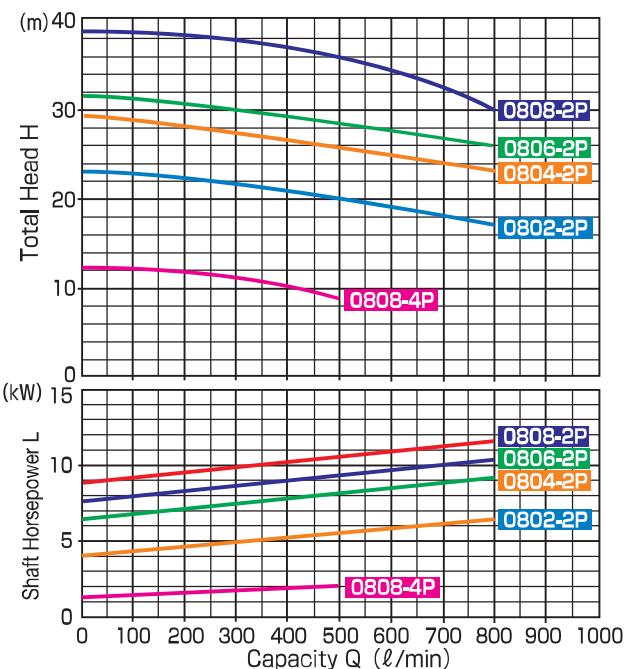

No.	Part Name	Materials
001	Casing	PP / PVDF
